SUBJECT
Invitation visiting researcher

Dear Göktug Ahunbay,

Via this letter I would like to invite you, Göktug Ahunbay, to visit the Membrane Science and Technology (MST) cluster of the University of Twente from 28 January until February 1, 2019. In this period, we will have the opportunity to discuss how we can initiate a strong collaboration on atomistic simulation of molecular transport in amorphous metal organic frameworks (MOFs). I am convinced that a combination of our experimental activities with your computational investigations lead to new insights that are crucial for further advances in the design and fabrication of high performance membranes for molecular separations.

If required, I am more than willing to provide more information or answer any questions, by e-mail, phone, or any other method of communication.

Looking forward to welcoming you in Twente,

Kind regards,

Prof. Dr. Nieck Benes
Chair Films in Fluids Group
