To whom it may concern

I am happy to invite Wissam Fakhardji, who is a PhD student under the supervision of Magnus Gustafsson at Luleå University of Technology, to visit our laboratory in Paris for five working days, March 21 through March 25 of 2016. This is an initial step of a promising collaboration between the Luleå group and ours. During the visit, Wissam is going to learn how to implement a molecular dynamics method to compute collision-induced absorption in gases. The method has been developed by myself and my colleagues. Wissam will apply it to molecular systems of importance in modeling of planetary atmospheres.
